

Matteo Leccese

FULL STACK DEVELOPER

Venezuela | +58 (424) 699-1599 | MatteoLeccese2099@gmail.com | linkedin.com/in/matteo-l

ABOUT ME

Full Stack Developer with 5 years of experience building scalable web platforms and backend systems, currently working in financial technology with React.js, Node.js, NestJS, PHP and Laravel. I design REST APIs, integrate third party payment providers and take applications all the way to production on cloud infrastructure, with a strong focus on data integrity, database performance and architecture that other developers can maintain. I work daily with AI assisted development tools such as Claude Code, and orchestrate AI agents to move faster without trading away code quality.

WORK EXPERIENCE

Full Stack Developer | Flusso Dynamics Group

FEB 2026 – PRESENT

- Integrated new payment gateway providers into currency exchange platforms, covering the full path from provider API integration to asynchronous callback handling, signature verification and idempotent processing.
- Maintained and evolved the core financial backend and its REST APIs, with particular attention to monetary precision, exchange rate handling and transaction consistency across the system.
- Deployed and managed applications on DigitalOcean, handling environments, databases, background workers and releases that reach production without downtime.
- Planned schema changes and data backfills for a system that deploys continuously, keeping every migration reversible and safe to run against live traffic.
- Rebuilt and extended the administrative management systems, improving internal workflows, UI/UX responsiveness and the operational control available to the team.
- Raised the engineering bar through automated testing, code review and technical documentation, keeping the codebase maintainable as the product and the team grew.

Full Stack Developer | Bitnat Redes y Sistemas

DEC 2023 – JUL 2025

- Designed and delivered the architecture behind applications serving high traffic volumes, built on Laravel and MySQL with scalability and long term maintainability as the driving criteria.
- Led the development of RESTful APIs connecting frontend clients and backend services, defining contracts, versioning and consistent error handling.
- Built responsive web applications, translating UX designs into functional interfaces in close collaboration with the design team.
- Improved database efficiency by profiling slow queries, restructuring schemas and introducing the indexes that actually moved the needle.
- Owned technical documentation end to end, from project specifications to user manuals.
- Raised code quality through systematic reviews, enforcing team conventions and catching regressions before they reached release.
- Reduced frontend load times and improved perceived responsiveness through asset optimization and more efficient rendering logic.
- Developed and shipped portable desktop applications for Windows using Python and SQLite, packaged as standalone executables.

Full Stack Developer | SousTitreur.com

FEB 2023 – AUG 2023

- Designed, developed and maintained responsive web applications using React.js with Redux on the frontend and PHP Slim for backend services.
- Built and maintained a REST API serving several web applications, keeping data flow consistent across all of them.
- Worked with product, design and QA in an agile setting to improve user experience and application performance.

- Introduced debugging and profiling practices that surfaced technical issues early and measurably improved system reliability.

Frontend Developer | Servieduca

OCT 2021 – FEB 2023

- Developed and maintained web applications with Angular and RxJS, focusing on performance, responsiveness and scalability within agile delivery cycles.
- Partnered with stakeholders across teams to launch projects, gather insights and refine features over successive iterations.
- Built and published mobile applications with React Native, designing the interfaces and handling releases on the Google Play Store.
- Optimized application workflows and debugging processes, identifying performance bottlenecks and improving code efficiency and maintainability.

EDUCATION

Informatics Engineering

2017 - 2021

Universidad Rafael Belloso Chacín, Zulia, Venezuela
